Bubble Jam turns the internet into a chamber theatre. It is a game platform. Its servers connect test players via smartphones that they are supplied with. They follow the chat of developers who are located elsewhere, and respond to their directions and questions to create a perfect round of Bubble Jam. What should it be about? Nightmares? Friends that you've never seen real? About what "type" you are? Bubble Jam measures the responses and determines from them who should discuss what with whom. Questions are derived from poll results about how to proceed: Who is playing? And whom is being played with?

„An interactive experiment that invites the audience to act as members of a digital cloud that explores itself and the different dynamics of a group of people sharing ideas, decisions and information

**DANIEL WETZEL**

Interactive game theatre for an audience of 60 people.

**Stage Dimensions:** Open space or stage with at least 4.6m x 26m (W,L) or alternatively 9,0m x 13,0m
